BUG TRACKING PROJECT — JIRA HANDS-ON PRACTICE

BUG TRACKING PROJECT

Problem Statement: BPS#24 – Public Bus Live Tracking & Crowding Estimator

Project Name: BugReport_BPS24

Project Key: BUG24

Tool Used: Jira

Project Type: Bug Tracking

NAME: SHWETHA S

SRN: PES1UG24CS452

SECTION: 'H'

1. INTRODUCTION

This document presents the implementation of a Bug Tracking project in Jira for the **Public Bus Live Tracking & Crowding Estimator** problem statement.

The purpose of the project is to identify, report, and track defects related to bus GPS tracking, ETA calculation, crowding estimation, commuter information, fleet monitoring, notifications, and system performance.

2. BUGS REPORTED

A total of **7 bugs** were reported in the Jira Bug Tracking project.

Bug 1 — Bus GPS location is not updating every 5 seconds

Description:

The bus location on the tracking screen does not update at the expected 5-second interval. The displayed location may remain outdated even when new GPS coordinates are available.

Bug 2 — Incorrect ETA displayed for bus

Description:

The system displays an incorrect estimated arrival time for a bus even when valid GPS data is available.

Bug 3 — Incorrect crowding level displayed**Description:**

The system displays an incorrect crowding level compared with the available ticketing or sensor data.

Bug 4 — Bus location, ETA and crowding information not displayed**Description:**

The commuter screen fails to display one or more of the required bus information fields such as location, ETA, or crowding level.

Bug 5 — Fleet Controller does not receive delay notification**Description:**

The system does not send a notification to the Fleet Controller when a bus exceeds the configured delay threshold.

Bug 6 — Fleet Controller does not receive high-crowding notification**Description:**

The system fails to notify the Fleet Controller when the crowding level exceeds the configured threshold.

Bug 7 — GPS data becomes unavailable during high vehicle load**Description:**

GPS/telemetry data is delayed or becomes unavailable when a large number of buses are being monitored simultaneously.

3. BUG REPORT SCREENSHOT

The following screenshot(s) show the bugs reported in the Jira Bug Tracking project.

Description:

The screenshot demonstrates that the identified bugs have been successfully reported and are visible in the Jira Bug Tracking project.

4. CONCLUSION

The Bug Tracking project for **BPS#24 – Public Bus Live Tracking & Crowding Estimator** was successfully created in Jira.

Seven project-specific bugs were identified and reported covering GPS tracking, ETA calculation, crowding estimation, commuter information, fleet notifications, and system performance.

The Jira Bug Tracking project provides a structured way to record and manage these defects during the development of the bus tracking system.
